# FIRECHIEF ARCHITECTURAL FIRE EXTINGUISHER CABINETS

## STYLE IN FIRE SAFETY

**Fire safety in building design is critical and cannot be compromised because lives are at stake. However, this constraint can present some real challenges for any design team. We recognise that any great building design needs to be perfect, right down to the smallest detail and we share your passion for getting it exactly right.**

Designed to integrate seamlessly into any interior, the Firechief range of architectural fire extinguisher cabinets come as standard in a choice of finishes - stainless steel, aluminium or white epoxy-coated steel trim – to complement your design perfectly.

The cabinets are finished to a very high quality, with glass or acrylic glazed doors for maximum extinguisher visibility, solid cast handles and a robust steel plate back box. They are specified and manufactured to protect their contents whilst adhering to the very latest fire safety standards.

Catering for a single 6 Litre water extinguisher with additive or a foam spray extinguisher, or a combination of the same with the popular 2kg carbon dioxide extinguisher, Firechief architectural cabinets accommodate fire extinguishers to tackle the majority of fire-fighting emergencies prevalent in modern buildings.

*'These cabinets offer an excellent solution to a recurring design problem'.*

# RECESSED CABINETS

The Firechief range of recessed cabinets offer the ultimate in discretion and are ideally suited to the modern interior for specification at design stage.

*'Fire Extinguisher cabinets can provide a means for compliance with the legislative requirement that extinguishers be readily accessible, while, at the same time, avoiding undue exposure of the appliances to tampering, removal or use as a doorstop.'* Senior Fire Safety Consultant - UK

# SEMI-RECESSED CABINETS

These cabinets offer a neat option for the storage of fire extinguishers where the wall depth does not permit full recessing. With a maximum projection of only 136mm and requiring a cavity depth of only 90mm or I 05mm, they are a perfect solution for retro-fit type projects.

# FINISHES AND SPECIAL REQUIREMENTS

If our standard finishes shown here are too restrictive for your requirements, endless possibilities are available by special request. Solid doors (ideal for education and healthcare locations), locking catches or bespoke etched-look glazing, are just some of the options available. Simply ask our sales team for more details.
